TELEHEALTH COLOCATION

TeleHealth is the culmination of expert care anywhere at any time. It bridges the distances to bring together the medicine, people, and technology needed to provide medical care by telecommunications and electronic delivery of medical expertise.

bigbyte.cc offers the solid foundational data center space for the health care information technology (IT) equipment, internet bandwidth, and other service carriers necessary to act as a hub to support your electronically delivered medical services.

Providing diverse expert medical assistance where it is needed, regardless of location, increasing speed to consultation, reducing delays for patient treatment, and enhancing the patient experience are all benefits associated with the advancements in TeleHealth initiatives. By using **bigbyte.cc** as a hub for your medical information technology, your groups will be able to provide consultation wherever and whenever it is needed.

bigbyte.cc data center is your hub to New Mexico and the world. Our carrier neutral facility offers many points of presence by many different internet providers and groups including the Lamda Rail.

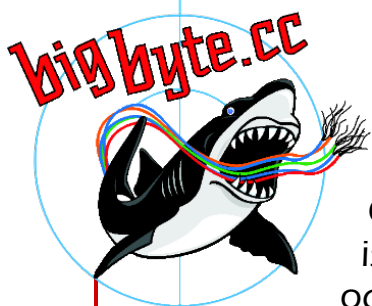

Additionally, **bigbyte.cc** provides the data center stability that you require for many of the technology based services that you currently provide or may be planning to provide, including:

- Site to site education
- Videoconferencing
- Streaming media
- Data warehousing
- Imaging and patient files storage
- Archiving
- Store-and-forward telemedicine

bigbyte.cc's infrastructure will allow deployment of IP based cybermedicine systems across multiple locations. You can provide expedited and more affordable patient follow-up while avoiding costly travel time.

TELEHEALTH COLOCATION

Choosing a co-location provider is a strategic business decision that is derived from thoughtful consideration and planning for technology implementation. While profiting from the cost savings bigbyte.cc can provide, you will be able to reduce both the capital and operating costs of maintaining your compute support infrastructure.

bigbyte.cc takes the complexity and worry out of your data center needs, offering:

- Scalable data center space
- Redundant power feeds
- N+1 Uninterruptible power supply (battery) systems
- Generator
- Raised-deck and solid floor data centers
- Full-time staff of electrical, facilities, & technical personnel
- Security on-site 24x7x365
- SSAE16 Type II certified
- Audit logs

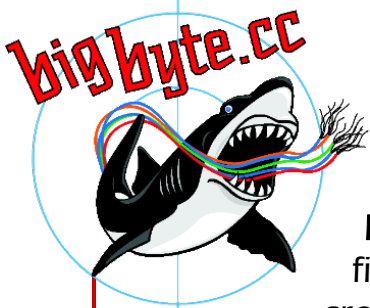

Your Data Center = Telehealth Hub

bigbyte.cc can assist you with the needed technological framework for beneficial coordination and collaboration between public and private stakeholders using all forms of medical information technology. The bigbyte.cc data center offers the foundation for a diversified group of medical organizations and practitioners to headquarter their information technology equipment in a "hub" location and easily connect to each other.

bigbyte.cc automates all possible audit trails to meet your needs. We have professionals on staff that can work with you to meet audit goals and compliance needs including HIPAA, Sarbanes-Oxley (SOX), Gramm-Leach-Bliley, ISO, NIST, FISMA and coordination in SSAE16 audits.
